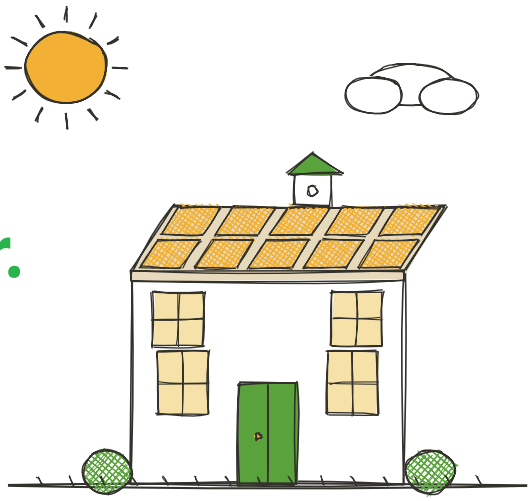
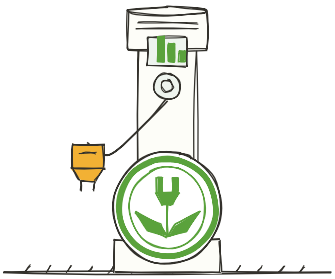
EKOenergy ecolabel



Selling panels is great. Selling impact is greater.

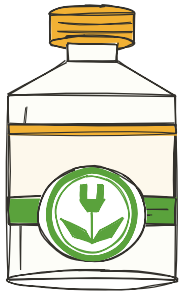
Known for the impact it adds on top of PPAs and green tariffs, EKOenergy works just as well with on-site installations, the solar you build.

A recognised ecolabel you can add to your offer



EKOenergy is a **non-profit, NGO-led ecolabel** for renewable electricity. You can include it in your service offers as **added value your competitors don't provide.** The contribution starts from just €0,18 per MWh consumed. Pass it to your client, or cover it yourself as a **symbolic gesture.**

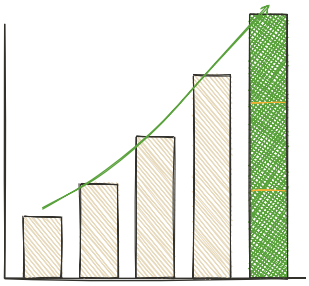
A mark your clients can show



The EKOenergy label is **internationally recognised** and backed by environmental NGOs. You and your clients can display it in their **own communication, on their materials, products and buildings,** as a credible third-party signal that their solar carries verified additional impact. **That strengthens their brand and yours.**

EKOenergy is highlighted by GHG Protocol, SBTi, LEED, CDP, RE100, and UN DESA

Adding EKOenergy is simple



✏️ **Sign up, free.** Sign the EKOenergy agreement as a seller. There's no cost and no minimum volume.

✅ **Prove the volumes.** You confirm the renewable volumes your clients consume. The contribution is €0,18 per MWh, and every cent funds our non-profit work: €0,10 to our Climate Fund for renewable energy in low- and middle-income countries, €0,08 to promoting renewables worldwide.

🗓️ **Report once a year.** Report consumed volumes each March, for the preceding year.

An easy way to stand out

EKOenergy's flexibility allows you to bundle the ecolabel into your value proposition. A **symbolic** commitment that **lifts the value** of your offer without lowering your price.

Installation
+ maintenance
+ EKOenergy ecolabel

Every MWh does more

- For every MWh consumed with the label, €0,10 goes to EKOenergy's **Climate Fund**, which finances renewable energy in low- and middle-income countries.
- These projects support many **Sustainable Development Goals (SDGs).**
- EKOenergy's criteria also **protect nature:** wind and solar sited outside key biodiversity areas, hydropower that respects fish migration and river flow.

Want to add this to your offer?

Email us, or book a short call, we'll take it from there.
