# EKOenergy: a mark of quality for renewables

- Promoting renewable energy + creating additional positive impact
- Launched by environmental organisations
- Available worldwide
- Criteria for:
  - Origin of the energy
  - Reliable tracking
  - Additional impact
  - Verification

# EKOenergy's Climate Fund

- EKOenergy users all over the world
- Contribute at least €0.10/MWh
- We organise calls for project and we select projects based on strict criteria:
  - In low- and middle-income countries
  - Non-profit organisations
  - Proven organisational capacity
  - In close cooperation with local communities
  - Energy projects, but energy in function of services that contribute to the realisation of multiple Sustainable Development Goals

# EKOenergy and partnerships

- Cooperation and partnerships are part of our DNA
  - Collaboration and close relations with energy sellers
  - We aim to help energy users
  - Exchange of experiences with other NGOs, sustainability standards, energy expert organisations, and more.
- Partnerships as starting point for our Climate Fund
  - No own projects. We review applications yearly and support projects by experienced organisations
  - International expert organisations, local energy experts, local communities....
  - We exchange experience between projects.

# Concrete Results

144 projects in 36 countries so far

- All projects have led to a concrete installation, to renewable energy that helps people in disadvantaged communities.
- Contribution to many Sustainable Development Goals
- Many projects have a multiplier effect:
  - Involved organisations learn and can use implemented projects in further fundraising.
  - Residents and decision-makers get to see the feasibility of renewables.
  - Local partnerships and structures lead to new opportunities ....

# Thank you
