

Our work is based on cooperation and involvement.

We launched the label in partnership with over 30 NGOs and we participate in networks such as CAN Europe.

The key elements of our label have always been sustainability, tracking, additional impact and verification.

## 10 YEARS OF... consistency and persistence

- Our vision and mission have remained unchanged since our launch.
- The approaches we chose and the solutions we developed in 2013 are standing the test of time and still suit the needs of a growing group of energy consumers.
- Persistence is a key element of our success. We know that renewable energy and nature protection are key to our common future, and we won't stop pursuing our goals.

Because we never needed big changes, stability has become an important argument for consumers to choose EKOenergy.

For the past 10 years, we have contacted tens of energy consumers and energy companies each week, repeating the same message over and over: everyone can contribute to speeding up the energy transition, and EKOenergy is a good tool to do so.

Thanks to our international approach, examples from one country can inspire consumers in other countries too.

Many of our processes and activities have become a routine, which allows us to work more efficiently and deal with larger volumes each year.

We budget our activities carefully and focus on using the means we have as efficiently as possible.

We have witnessed many evolutions in the renewable energy markets. EKOenergy is compatible to almost all new developments.

We focus on the promotion of 100% sustainable and renewable energy, on our social media, in our daily meetings, in our publications.
