

Thanks to our partners worldwide, we can present our work in many countries, without having to travel there.

In 2017, our label was used in Latin America and in Africa for the first time.

First EKOenergy in China in 2016.

10 YEARS OF... internationalisation

- From the start, our label has adopted an international approach. Originally we focused on the European markets, but soon we realised that our approach works outside of Europe too.
- EKOenergy comes from production facilities that are located within the same markets where the consumption takes place.
- We are continuously expanding our network of authorised sellers.

Outside Europe, most of the demand for EKOenergy comes from large multinational consumers. Their concrete demand helps us develop our activities in new markets.

EKOenergy was used in 3 countries in 2013, and in 71 countries in 2022

We started in Northern Europe in 2013.

In 2018 and 2019, we made many of our materials available in Japanese and used these to get in touch with Japanese NGOs and companies.

Our participation in the EU-China NGO twinning programme in 2017, allowed us to get in touch with a lot of relevant stakeholders in China.

In countries such as Ecuador, Peru and Uganda, the first EKOenergy consumers used EKOenergy from their own on-site solar installations.
