

Our smallest consumers use less than 1 MWh per year. Our largest use more than 1 TWh per year.

The EKOenergy contributions consist of a fixed price per MWh, without other costs. This makes our ecolabel more easily available for small consumers too.

10 YEARS OF... working with consumers of all sizes

- We have always found it important that our ecolabel answers the needs of both large and small consumers.
- We are continuously expanding our network of authorised energy companies, making EKOenergy easily available for households in many countries.
- Our label is increasingly popular with sustainability consultants and large international energy companies. This makes EKOenergy a feasible option for large international companies.

SCHOTT and the Iliad Group are the first companies that signed PPAs for the supply of EKOenergy-labelled energy.

Between 2014 and 2016, EKOenergy-labelled green tariffs became available in France, Spain, Germany and Italy.

In 2016, SAP was one of the first multinational companies to choose EKOenergy.

Our multilingual communication materials aim to appeal to both household consumers and large corporate consumers.

In 2015, Helsinki Environmental Services (HSY) was among the first large consumers to choose EKOenergy.

In 2022, 18 of the RE100 companies used EKOenergy to cover at least a part of their electricity consumption.
