

We have checked more than 3500 installations, mainly wind farms and solar parks. Each request gives us the opportunity to raise awareness of biodiversity.

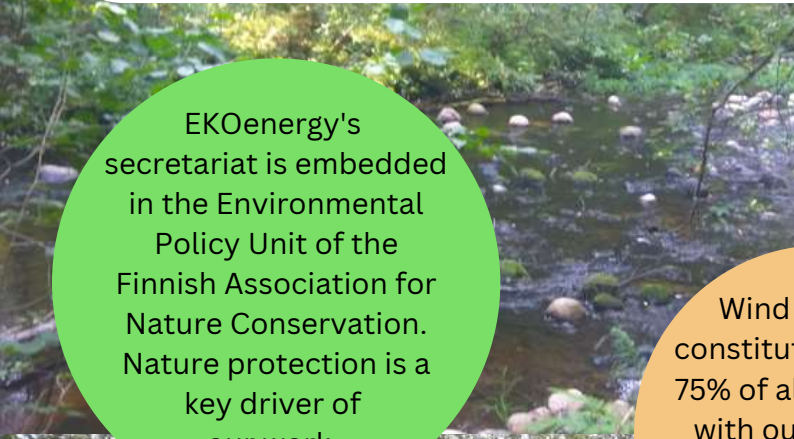

Between 2016 & 2021, we participated in the EU-funded Freshabit project, allowing us to focus on the impact of hydropower on river ecosystems.

In 2017, we organised a well-attended seminar about fish passages.

10 YEARS OF... nature protection

- EKOenergy's sustainability criteria focus on the impact of energy production on nature. Only kilowatt-hours that come from installations that fulfil our criteria can get our label.
- Users of EKOenergy-labelled hydropower pay an additional contribution. That payment goes to our Environmental Fund and is used to finance river protection projects.
- Our label is a tool to raise awareness about the links between climate protection and nature protection.

EKOenergy's secretariat is embedded in the Environmental Policy Unit of the Finnish Association for Nature Conservation. Nature protection is a key driver of our work.

We regularly share articles and reports about the many links between nature conservation and climate protection on our social media.

Wind and solar constitute more than 75% of all power sold with our label. The share of these types of renewable energy grows each year.

Through our Environmental Fund, we financed 25 river projects, for a total amount of 436,000€.

Participation in river restorations is one of the favourite team building activities of EKOenergy's secretariat.

With regard to bioenergy, EKOenergy focuses on the use of residues.
