

EKOenergy
ecolabel

Sustainable renewable gas which helps make an extra positive impact

The **non-profit** EKOenergy label is a **globally available** and prize-winning option for those who want to go the extra mile. The label is available for renewable electricity, renewable heat and cold, and renewable gas. Renewable gas includes **biogas** such as biomethane or biopropane, as well as **green hydrogen**.

EKOenergy-labelled gas fulfils **additional sustainability criteria**. It comes from sustainable types of biomass or gasification of sustainable renewable electricity. It doesn't jeopardise food security or social justice.

Your purchase leads to an additional positive impact in many ways. 0,10 € per MWh is used to finance **new renewable energy projects** in developing countries. All financed projects contribute to the realisation of the UN's **SDGs**.

0,08 € per MWh goes to EKOenergy's advocacy to **promote** renewable energy worldwide.

EKOenergy is a non-profit initiative of several environmental NGOs. The ecolabel's goal is to **help consumers find** the most sustainable types of energy and **communicate** about their choice of renewable energy. Using EKOenergy helps fight energy poverty and using our internationally recognised logo **inspires others** to do the same.

Are you a supplier or consumer interested in
offering or using EKOenergy-labelled gas?
